QuickBooks Plugin

This sample plugin provides the functionality of importing orders from QuickBooks invoices. It is useful for learning how to use information from external sources to create and insert orders into schedules. The file *ImportOrdersFromInvoicesCmd.cs* contains all the code for creating the command.

Installation:

1. Copy the plugin DLL (*QuickBooksPlugIns.dll*) into the ArcLogistics install directory.

Usage:

1. A button called *Import from QuickBooks* appears on the *Tasks* widget of the *Optimize and Edit* action panel of the *Schedule* tab.
2. Follow the procedure described in the document **Using ArcLogistics Import from QuickBooks PlugIn** to import orders from QuickBooks invoices.

Customization:

1. Open the Visual Studio project *QuickBooksPlugIns.*
2. Modify references and project settings if needed.
3. Modify the code in the *Execute* method and its support methods to change plugin behavior. They contain logic for accessing information from QuickBooks and inserting it into ArcLogistics.
4. It may also be useful to change some of the other functions or properties, such as *Title* and *Tooltip*.
5. Rebuild the project to obtain the new dll.
6. Copy the dll into the install directory, and run ArcLogistics to check the results.
